

Community observatory field guide

Willow Ridge Learning Circle

EDITION

Autumn 2026

TOPIC

Night sky observations

PREPARED BY

Taylor Reed

REFERENCE

NOTE-7354

Before the session

Choose an open observation site away from bright street lights. Give your eyes time to adjust before looking for faint stars. A red light helps preserve night vision.

Recording observations

Write the time, sky conditions, and direction of each observation. Sketch the position of bright objects against a familiar constellation. Compare notes at the end of the session.

Equipment care

Keep protective covers on unused lenses. Dry the exterior before storage and leave damp cases open until the lining is dry.
