

# Community observatory field guide

Marble Kite Learning Circle

EDITION

Autumn 2026

TOPIC

Night sky observations

PREPARED BY

Riley Finch

REFERENCE

NOTE-7355

## Before the session

Choose an open observation site away from bright street lights. Give your eyes time to adjust before looking for faint stars. A red light helps preserve night vision.

## Recording observations

Write the time, sky conditions, and direction of each observation. Sketch the position of bright objects against a familiar constellation. Compare notes at the end of the session.

## Equipment care

Keep protective covers on unused lenses. Dry the exterior before storage and leave damp cases open until the lining is dry.

Reference 7355 / continued

### Additional notes

Continuation of reference 7355. These supporting details belong to the same source document as the preceding page.

### Record keeping

Maintain the original reference with all supporting notes. This page intentionally omits the first-page title to exercise continuity across a page boundary.
