

Community observatory field guide

Orchid Field Learning Circle

EDITION

Autumn 2026

TOPIC

Night sky observations

PREPARED BY

Parker Quinn

REFERENCE

NOTE-7357

Before the session

Choose an open observation site away from bright street lights. Give your eyes time to adjust before looking for faint stars. A red light helps preserve night vision.

Recording observations

Write the time, sky conditions, and direction of each observation. Sketch the position of bright objects against a familiar constellation. Compare notes at the end of the session.

Equipment care

Keep protective covers on unused lenses. Dry the exterior before storage and leave damp cases open until the lining is dry.

Reference 7357 / continued

Additional notes

Continuation of reference 7357. These supporting details belong to the same source document as the preceding page.

Record keeping

Maintain the original reference with all supporting notes. This page intentionally omits the first-page title to exercise continuity across a page boundary.
